- External Anatomy and Identification

Question Example: What are the main external features of a perch?

Deep Dive Answer:

The external anatomy of a perch includes several distinctive features:

- Fins: Dorsal (top), pectoral (side, near gills), pelvic (bottom, near the front), anal (bottom, near the tail), and caudal (tail fin). These fins aid in movement, stability, and steering.
- Scales: Small, overlapping structures that provide protection and aid in movement.
- Operculum: The bony plate covering the gills, visible on the sides of the head.
- Mouth and Nostril Openings: Used primarily for feeding and sensing the environment.

Understanding these external features helps in orienting the specimen during dissection.

- Internal Anatomy and Organ Systems

Pre-lab answers typically guide students to identify and understand the function of internal organs:

- Gills: The respiratory organs that extract oxygen from water.
- Heart: Pumps blood throughout the body; located just behind the gills.
- Liver: A large organ involved in digestion and metabolism.
- Stomach and Intestines: Digestive organs responsible for breaking down food and absorption.
- Swim Bladder: A gas-filled sac that helps the fish maintain buoyancy.
- Reproductive Organs: Ovaries or testes, depending on sex.
