Q: What is the purpose of a thorough examination of lifting equipment?

A: To ensure that lifting gear is safe to use, compliant with regulations, and fit for purpose. It involves visual inspections, load testing, and documentation.

- Signaling Techniques

Effective communication is vital in lifting operations. The test assesses knowledge of standard

signals, including:

- Hand Signals: Under the British Standards (BS 7121), common signals include:
 - Stop: Arm extended horizontally with palm facing outward.
 - Raise the load: Arm pointing upward with the palm facing the load.
 - Lower the load: Arm pointing downward with the palm facing downward.
 - Swing the load: Signal with a circular motion of the hand.
 - Travel: Arm extended in the direction of travel, with a sweeping motion.

- Radio Signals: Use clear, concise commands, such as:
 - "Hold position"
 - "Lower slowly"
 - "Swing left/right"

Q: Why is it important to use standardized signals?

A: To prevent miscommunication, which could lead to accidents, load drops, or equipment damage. Standardized signals ensure clarity across different teams and operators.

Before any lift, thorough preparation is essential:

- Load Inspection: Confirm that the load is secure, balanced, and within weight limits.
- Equipment Inspection: Check the crane, slings, hooks, and other gear for defects.
- Site Assessment: Ensure the area is clear of obstructions and personnel.
- Communication Plan: Establish signals and procedures.

Q: What are the key steps in a pre-lift inspection?

A:

- Visual inspection of lifting gear for wear, corrosion, or damage.
- Verifying load weight and ensuring it matches the lifting plan.
- Checking the crane's operational status.
- Confirming all personnel are briefed and aware of their roles.

- Safety Protocols and Emergency Procedures

Safety is paramount. The test checks knowledge of:

- Hazard Identification: Recognizing potential risks such as unstable loads, overhead power lines, or poor weather.
- Risk Assessment: Evaluating and mitigating risks before starting lifts.
- Emergency Procedures:
 - Immediate stop of operations in case of danger.
 - Evacuation protocols.
 - Reporting incidents promptly.

Q: What should a slinger signaller do if they notice an unsafe condition during a lift?
