Common Questions in Modern Biology Section 26.1 and Their Explanation

Below are some typical questions from this section, along with detailed explanations that mirror the answer key responses.

Question 1: What is the primary function of the cell membrane?

Answer: The primary function of the cell membrane is to regulate what enters and exits the cell, thus maintaining homeostasis. It acts as a selective barrier, allowing nutrients to enter, waste products to leave, and preventing harmful substances from entering.

Explanation: The cell membrane, primarily composed of phospholipids and proteins, exhibits selective permeability. This means it permits certain molecules to pass while blocking others, often

through processes like diffusion, osmosis, and active transport.

Question 2: Which macromolecule is primarily responsible for storing genetic information?

Answer: Nucleic acids, specifically DNA (deoxyribonucleic acid), are responsible for storing genetic information.

Explanation: DNA contains the instructions necessary for the growth, development, and reproduction of all living organisms. Its double-helix structure enables it to replicate accurately during cell division.

Question 3: Differentiate between prokaryotic and eukaryotic cells.

Answer: Prokaryotic cells lack a nucleus and membrane-bound organelles, whereas eukaryotic cells possess a nucleus and a complex system of membrane-bound organelles.

Explanation: Prokaryotes, such as bacteria, are simpler and typically smaller. Eukaryotes, including plants, animals, and fungi, have compartmentalized structures that perform specific functions, allowing for greater cellular complexity.

Question 4: Describe the process of protein synthesis.

Answer: Protein synthesis involves two main processes: transcription and translation. During transcription, a segment of DNA is transcribed into messenger RNA (mRNA). During translation, the mRNA is read by ribosomes to assemble amino acids into a specific protein.

Explanation: This process ensures that genetic information is accurately converted into functional proteins, which carry out various cellular activities.
