Step-by-Step Troubleshooting Guide

1. Furnace Won't Ignite

One of the most common issues is the furnace failing to ignite. Here's how to troubleshoot:

- **Check the Power Supply:** Ensure your RV's battery and shore power are functioning. A weak or dead battery can prevent ignition.
- **Inspect the Circuit Breaker and Fuses:** Verify that the furnace's circuit breaker hasn't tripped and fuses are intact.
- **Examine the Thermostat Settings:** Confirm that the thermostat is set to a temperature higher than the current room temperature and is functioning correctly.
- **Check the Propane Supply:** Make sure your propane tank isn't empty and the supply valve is open.
- **Inspect the Igniter:** Look for signs of wear or corrosion on the igniter. Clean or replace if necessary.
- **Test the Flame Sensor:** A dirty or faulty flame sensor can prevent ignition. Clean with a wire brush or replace if defective.

2. Furnace Not Producing Heat

If your furnace turns on but doesn't heat the space adequately, consider these troubleshooting steps:

- **Check the Thermostat:** A malfunctioning thermostat can incorrectly signal the furnace. Test or replace it if needed.
- **Inspect the Burner:** Ensure the burner is clean and free from debris or soot buildup.
- **Examine the Gas Lines:** Look for leaks, blockages, or kinks in the gas lines.
- **Verify the Venting System:** Blockages or restrictions in the venting can impede proper airflow. Clear obstructions.
- **Ensure Proper Airflow:** Check air filters and vents for dirt or clogging.

3. Unusual Noises During Operation

Strange sounds can indicate mechanical issues:

- **Squealing or Whining:** May suggest a failing blower motor or belt issues. Inspect and replace if needed.
- **Banging or Rumbling:** Could be caused by delayed ignition or gas buildup. Turn off the furnace immediately and seek professional help.
- **Hissing or Gas Odor:** Indicates a gas leak. Evacuate immediately and contact emergency services.

4. Furnace Cycling On and Off Frequently

This problem is often related to insufficient airflow or thermostat issues:

- **Check Thermostat Placement:** Ensure it's not near heat sources or drafts.
- **Inspect Air Filters:** Replace clogged filters to improve airflow.
- **Examine the Limit Switch:** A faulty switch can cause short cycling. Replace if necessary.
- **Assess the Venting System:** Clear obstructions to allow proper airflow.

5. Gas Odor or Fumes

Detecting gas fumes is a serious concern:

- **Turn Off Furnace Immediately:** Ventilate the area and avoid using electrical switches.

This article offers a detailed overview of Atwood furnace troubleshooting, combining technical insights with user-friendly guidance to help both novices and seasoned RV owners maintain their heating systems efficiently.

Understanding the Basics of Atwood Mobile Furnaces

Before delving into troubleshooting, it's crucial to understand how Atwood mobile furnaces operate. These appliances are designed to provide reliable heat using propane combustion, integrated with electrical components that control ignition, airflow, and safety features.

Key Components:

- Burner Assembly: Burns propane to generate heat.
- Ignition System: Includes a spark igniter or hot surface igniter to light the burner.
- Circulating Fan: Distributes heated air throughout the RV or mobile space.
- Thermostat: Regulates temperature by signaling the furnace to turn on or off.
- Limit Switch: Acts as a safety device to shut down the furnace if it overheats.
- Gas Valve: Controls the flow of propane to the burner.
- Electrical System: Provides power for ignition, fans, and safety devices.

Understanding these components helps isolate issues when troubleshooting.

Common Problems Encountered with Atwood Mobile Furnaces

Many issues with Atwood furnaces are common across models and can often be diagnosed with basic checks. Below are some frequently reported problems:

- Furnace won't ignite
- Furnace runs but produces no heat
- Furnace cycles on and off frequently
- Unusual noises during operation
- Error codes or blinking lights on digital models
- Furnace shuts down unexpectedly

Each problem has specific causes and solutions, which will be explored in depth.

Troubleshooting Steps for Atwood Mobile Furnace Issues

- Diagnosing Ignition Problems

Problem: The furnace attempts to ignite but fails to light or starts and then shuts down.

Potential Causes:

- Faulty igniter or electrode
- Gas supply issues
- Ignition control module malfunction
- Dirty or clogged burners
- Low propane pressure

Troubleshooting Steps:

a. Check the Propane Supply:

Ensure the propane tank is full and valves are open. If the tank is empty, refill it. For systems with regulators, verify that the regulator is functioning correctly and that pressure is adequate.

b. Inspect the Igniter and Electrode:

Look for signs of damage, corrosion, or carbon build-up. Clean the igniter tip with a soft brush or cloth. Replace if cracked or worn.

c. Verify the Ignition System Operation:

Turn on the furnace and observe the ignition process. You should see a spark when the system attempts to ignite. If no spark occurs, test the igniter's wiring and connections.

d. Check the Gas Valve:

Ensure the gas valve opens when the furnace calls for heat. Use a multimeter to test electrical continuity. If faulty, replace the valve.

e. Assess the Burner:

Remove and clean the burner assembly, removing any dust, spider webs, or debris that could block gas flow.

f. Inspect the Control Module:

Some models have a circuit board that controls ignition. Look for signs of burn marks or damage. If malfunctioning, professional replacement may be necessary.

- Addressing No Heat Output

Problem: The furnace runs, but no warm air is delivered.

Potential Causes:

- Faulty circulation fan motor
- Blocked or dirty air vents
- Thermostat issues
- Overheating limit switch tripped
- Ductwork obstructions

Troubleshooting Steps:

a. Check the Thermostat Settings:

Ensure it's set to a temperature higher than the current room temperature. Replace batteries if applicable.

b. Inspect the Circulating Fan:

Listen for the fan running during operation. If silent, test the motor for power; replace if defective.

c. Examine Air Vents and Ducts:

Clear any obstructions or debris blocking airflow. Clean filters if present.

d. Test the Limit Switch:

A tripped limit switch can shut down the furnace to prevent overheating. Reset or replace as needed.

e. Verify the Thermocouple or Flame Sensor:

Dirty or malfunctioning sensors can prevent the furnace from maintaining a flame, leading to shutdowns. Clean with a soft cloth or replace if faulty.

- Dealing with Frequent Cycling or Short Cycling

Problem: The furnace keeps turning on and off rapidly.

Potential Causes:

- Overheating due to blocked vents or dirty filters
- Faulty thermostat
- Malfunctioning limit switch
- Poor airflow or insufficient ventilation

Troubleshooting Steps:

a. Inspect and Clean Air Filters:

Replace or clean filters regularly to maintain airflow.

b. Check Ventilation and Airflow:

Ensure vents are open and unobstructed. Clean ducts if necessary.

c. Test the Thermostat:

Replace batteries or calibrate the thermostat if it's faulty.

d. Examine the Limit Switch:

A malfunctioning limit switch can cause premature shutdowns. Test with a multimeter and replace if necessary.

e. Allow the Furnace to Cool:

Overheating can trigger safety shutoff. Ensure adequate ventilation and proper placement.

- Resolving Error Codes or Blinking Lights

Many modern Atwood furnaces have digital displays or indicator lights that signal faults.

Common Error Codes and Their Meanings:

| Error Code | Description | Troubleshooting Tips |

|-----|-----|-----|

| E1 | Ignition failure | Check igniter, gas supply, and wiring. |

| E2 | Overheat or limit switch | Reset limit switch, check airflow. |

| E3 | Flame failure | Inspect flame sensor, gas valve, and burners. |
