It is administered annually by the Mathematical Association of America (MAA) and serves multiple purposes: identifying mathematical talent, encouraging problem-solving skills, and serving as a qualifier for subsequent competitions like the AIME and USAMO.

The exam consists of 25 problems, each with five answer choices, covering a broad spectrum of mathematical topics, including algebra, geometry, number theory, and combinatorics. The questions are designed to test not just rote memorization but also creative reasoning, pattern recognition, and logical deduction.

Importance of the 2012 Edition

The 2012 AMC 12 was notable for several reasons:

- It reflected the changing trends in problem difficulty and style.
- It was part of a broader movement to increase participation and diversity in math competitions.
- The results from 2012 influenced the selection process for the USA Mathematical Olympiad team and provided insights into the level of mathematical preparedness among American high school students at that time.

Contest Format and Scoring in 2012

The 2012 AMC 12 maintained its traditional format:

- 25 multiple-choice questions
- 75 minutes to complete the exam
- Each correct answer earns 6 points
- No points are deducted for wrong answers or blanks
- The maximum score is 150 points

The scoring system incentivizes attempting all questions, as guessing carries no penalty. The cutoff scores for qualification to subsequent competitions vary yearly, but typically, around the top 2.5%–5% of scorers advance.

Notable Problems and Mathematical Themes in 2012

The 2012 AMC 12 featured problems that tested a wide array of mathematical concepts, often emphasizing ingenuity over extensive computation. Some problems stood out for their elegance and challenge level.

Sample Problems and Their Analysis

Problem 1 (Example):

If x and y are positive real numbers satisfying $xy = 1$, what is the minimum value of $x + y$?

Solution:

This classic problem involves the AM-GM inequality.

By AM-GM:

$$x + y \geq 2\sqrt{xy} = 2$$

Equality holds when $x = y = 1$.

Answer: 2

Educational Value:

Introduces students to inequalities and optimization principles.

Problem 12 (Example):

A regular hexagon has side length 2. What is the area of the hexagon?

Solution:

Area of a regular hexagon with side length s :

$$\frac{3\sqrt{3}}{2} s^2$$

Plugging in $s = 2$:

$$\frac{3\sqrt{3}}{2} \times 4 = 6\sqrt{3}$$

Answer: $6\sqrt{3}$

Educational Value:

Reinforces knowledge of geometric formulas and properties of regular polygons.

Problem 20 (Example):

How many integers n between 1 and 1000 inclusive satisfy that $n^2 + 3$ is divisible by 4?

Solution:

We analyze the parity of n :

- If n is even, $n^2 \equiv 0 \pmod{4}$, so $n^2 + 3 \equiv 3 \pmod{4}$, not divisible by 4.
- If n is odd, $n^2 \equiv 1 \pmod{4}$, so $n^2 + 3 \equiv 4 \equiv 0 \pmod{4}$.

Thus, all odd n satisfy the condition.

Number of odd integers between 1 and 1000:

Since 1 to 1000 inclusive has 500 odd numbers.

Answer: 500

Educational Value:

Demonstrates modular arithmetic and parity considerations.
