Detailed Answers and Explanations in Reporting Category 1

Incorporating answers alongside questions in Biology 1 Reporting Category 1 enhances
comprehension and retention. Below are examples of common questions with analytical
answers:

What are the seven characteristics of life?

1.

The seven characteristics of life include cellular organization, reproduction,
metabolism, homeostasis, heredity, response to stimuli, and growth and
development. These properties collectively de?ne living organisms and distinguish
them from non-living matter.

Explain the cell theory.

2.

The cell theory posits that all living organisms are made up of one or more cells, the
cell is the basic unit of life, and all cells arise from pre-existing cells. This theory is

fundamental because it establishes the cell as the essential building block of life and frames much of modern biological research.

Describe the differences between prokaryotic and eukaryotic cells.

3.

Prokaryotic cells lack a defined nucleus and membrane-bound organelles, generally being smaller and simpler, as seen in bacteria. Eukaryotic cells have a true nucleus and complex organelles, typical of plants, animals, fungi, and protists. These structural differences impact cellular functions and organism complexity.

What are the four major biological macromolecules and their functions?

4.

The four major macromolecules are carbohydrates (energy storage and structural support), lipids (long-term energy storage and membrane structure), proteins (enzymes, structural components, signaling), and nucleic acids (DNA and RNA, carriers of genetic information).

Integrating Scientific Methods into Biology 1

A strong component of Biology 1 Reporting Category 1 involves the scientific method and its application. Students learn to formulate hypotheses, design controlled experiments, collect and analyze data, and draw conclusions. This procedural knowledge supports the development of critical thinking and problem-solving skills.

Educators often emphasize the importance of variables— independent, dependent, and controlled—to ensure experimental validity. For example, in an experiment testing the

effect of light on plant growth, light intensity would be the independent variable, plant height the dependent variable, and soil type, water amount, and temperature as controlled variables.
