Understanding Sergison Bates Architects and Their Design

Philosophy

Sergison Bates Architects, founded by Jonathan Sergison and Stephen Bates in 1996, has

steadily built a reputation for creating architecture that is at once rigorous, humane, and

contextually sensitive. Their work is characterized by a thoughtful engagement with

materials, light, and spatial relationships. The 2004-2016 El Croquis volume highlights a

period when the practice matured significantly, embracing complexity and subtlety in their projects.

Contextuality and Materiality

One of the hallmarks of Sergison Bates' architecture is their profound respect for context.

Instead of imposing generic forms, they often respond to the social, historical, and physical surroundings of each site. This approach is evident in many projects featured in the El Croquis BA monograph, where buildings emerge organically from their environment.

Materiality plays a crucial role in their work. The architects have a penchant for using traditional materials—brick, timber, concrete—in innovative ways, often revealing their construction logic and texture. This material honesty fosters a tactile quality that invites occupants to connect deeply with the space.

Human Scale and Spatial Experience

Unlike some contemporary architecture that prioritizes spectacle, Sergison Bates focus on human scale and the experience of space. Their buildings are designed to be lived in, touched, and understood over time. The El Croquis BA volume showcases interiors and exteriors that balance openness and enclosure, light and shadow, movement and stillness.

This is evident in projects like the Peabody Terrace in London, where brickwork patterns modulate the façade's permeability, enhancing natural ventilation while contributing to the building's identity.
